

# Step-by-Step Guide to Associate Subnets with an AWS Client VPN Endpoint

## Step 1: Open the AWS Console

1. Go to the **Amazon VPC Console**.
2. Search and click on **Client VPN Endpoints**.
3. Select your existing **Client VPN endpoint**.

## Step 2: Associate the First Subnet

1. Click on the **"Associations"** tab.
2. Click **Associate Subnet**.
3. Choose:
  - a. **VPC ID**: dev/alpha.
  - b. **Subnet**: Select one of your private subnets.
  - c. Click **Associate**.

## Step 3: Associate the Second and Third Subnets

Repeat the steps:

1. Click **Associate Subnet** again.
2. Choose the second **private subnet** (in a different AZ).
3. Click **Associate**.

Then repeat once more for the **third private subnet**.
